

CURRENT

Kick off thrilling FinTech startups and create infrastructure and frameworks across ventures

We are looking for a **Rockstar** **Data Engineer** in Munich

It's time to change the way the world interacts with money. CURRENT creates ground-breaking fintech ventures with the best people bringing together subject matter expertise and technology.

What you are in for

You will work with successful serial entrepreneurs, very experienced technology experts, senior advisors as well as the smartest founders in Fintech within our ventures. You'll help kick start multiple next generation Fintech ventures as well as create infrastructure and frameworks used across ventures.

Why you should join

To be part of the exciting first year of thrilling FinTech startups

To see yourself making the difference between a flop and a potential unicorn

To live your entrepreneurial mindset and see the ventures growing you dedicated all your professional energy to

What you will be doing

YOU TEACH the machine how to make decisions like the best human experts

YOU ANALYZE financial and transactional data provided by our customers to find the patterns that are decisive

YOU TRAIN machine learning models based on historic data and find alternative approaches if there's a lack of history

YOU INTEGRATE those models in mission critical real time services

YOU CONTRIBUTE to the growth of the ventures by taking a key role in our technical team

YOU TAKE RESPONSIBILITY within a team of highly skilled experts, with love for details and an eye for the bigger picture

YOU GROW by proofing your skill, using state of the art tools, experiencing business and learning something new every day

You are responsible for

- Our services to make smart databased decisions based on ML and business intelligence
- Choosing the best fitting approaches in continuous revolutionary world of ML and big data
- Integrating smart models into our services serving our customers 24/7

Your key goals and objectives

- Develop and train the models making decisions like humans
- Have these models running performant and stable
- Make ML based decisions transparent

Your background

- **ML** - you are an expert in machine learning. Deep expertise in concrete tools like XGBoost and thorough understanding of the state of the art ML approaches.
- **Big Data** - you know how to analyze data and how to automate the processes around that
- **Technology** - You know how to integrate ML into online services operating on a Java platform
- **Cloud** - It is your home. You live it. You breath it.
- **Agility** - Strong willingness to deliver. Always hands-on.
In the team, with the team and for the team.
